

## Using this Catalogue When Looking for an Alternator

All alternators shown in this catalogue are accompanied by dimensional details to assist in identification. Please note that the dimensions provided are nominal and should only be used for identification purposes.

## Integrally Regulated Universal Pump Alternators

HXA005 12 Volt 70 Amp and HXA006 12 Volt 50 Amp (HXA005 pictured)

NOTE: Link & Plugs are for HXA005. Refer to main catalogue for HXA006 plug configuration

HXA005, HXA006, HXA008 & HXA009 are universal alternators and not a direct replacement for the O.E. unit. Due to the large range of pump alternators, not all will have the same fittings therefore some slight modifications to the hoses may be required. Also, in some applications the O.E. pulley may have to be used.

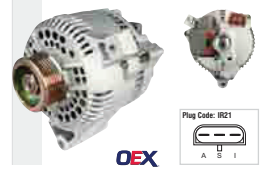

Please note these units are fitted with a 30cc capacity vacuum pump only. For applications where a larger capacity vacuum pump is required, universal alternators HXA055, HXA056, HXA057 & HXA060 are fitted with a 50cc vacuum pump.
